

Are you living in a bushfire prone area and concerned about the safety of your home?

Whilst the risk of bushfire in this area is very real, there are things you can do to greatly reduce your properties exposure to damage or loss, thus giving you the peace of mind to enjoy your new home and the extensive natural environment that surrounds us.

- **Bushfire Property Protection Solutions** can supply, design and install a **Rain Shield System** that addresses your property's specific needs.
 - Our **Rain Shield System** fully encompasses your home and outbuildings in a monsoon like "shield" of water.
 - Intelligent sensors detect and differentiate between Ember Attack and an approaching Fire Front. The system can be activated by long range, handheld remote controls, as well as the fully automated sensor system.
 - You can be away on holiday and our **Rain Shield System** will protect your home automatically.
 - Our **Rain Shield System** is suitable for off grid situations and will remain fully operational during loss of power, often experienced due to bushfire.
 - The system uses a non-mains stand alone water supply. This can be incorporated into your existing water storage or additional storage can be designed into your system if required.
 - Our system fully protects itself during a fire, ensuring continual operation when needed most.
- Our **Rain Shield System** can be fitted to any outbuilding such as sheds, stables, kennels,
- on-site shipping containers as well as your main dwelling.
