WHO AM I ?- Part 2

Research Question: "What do community members do (and see others doing) after a natural disaster, that helps their community to recover?

COMMUNITY RESILIENCE

The capacity of individuals, communities, institutions, and systems exposed to hazards to survive, adapt, and thrive in ways that improve outcomes in the next disaster event and improve community well-being more broadly.

OUR MISSIONS

Our blueprint identifies three missions, to be achieved by 2025:

FIRE SHIELD

What if a fire never became a disaster?

Mission: reduce the scale and impact of bushfires by being able to extinguish dangerous fires within an hour by 2025.

RESILIENT COMMUNITIES

What if every community had the skills and resources to mitigate their disaster risk and bounce back stronger?

Mission: lift Australia's 50 most vulnerable communities to be on par with Australia's 50 most resilient communities by 2025.

HEALTHY LANDSCAPES

What if our environment was optimised for risk reduction and natural ecosystem resilience?

Mission: halve hazard exposure in Australia's 50 most fire and flood prone regions by 2025.

...

Residents watch a large bushfire as seen from Bargo, 150km southwest of Sydney, on December 19, 2019. Photo credit: Peter Parks/Contributor

OUR RESILIENT COMMUNITIES MISSION

OUR COMMUNITIES ARE IN THE GRIP

THE RESILIENT COMMUNITIES MISSION

Lift 50 of Australia's most vulnerable communities to be on a par with Australia's most resilient communities by 2025. We will achieve this through community-led resilience planning, leadership development and community capacity building, and by working in partnership.

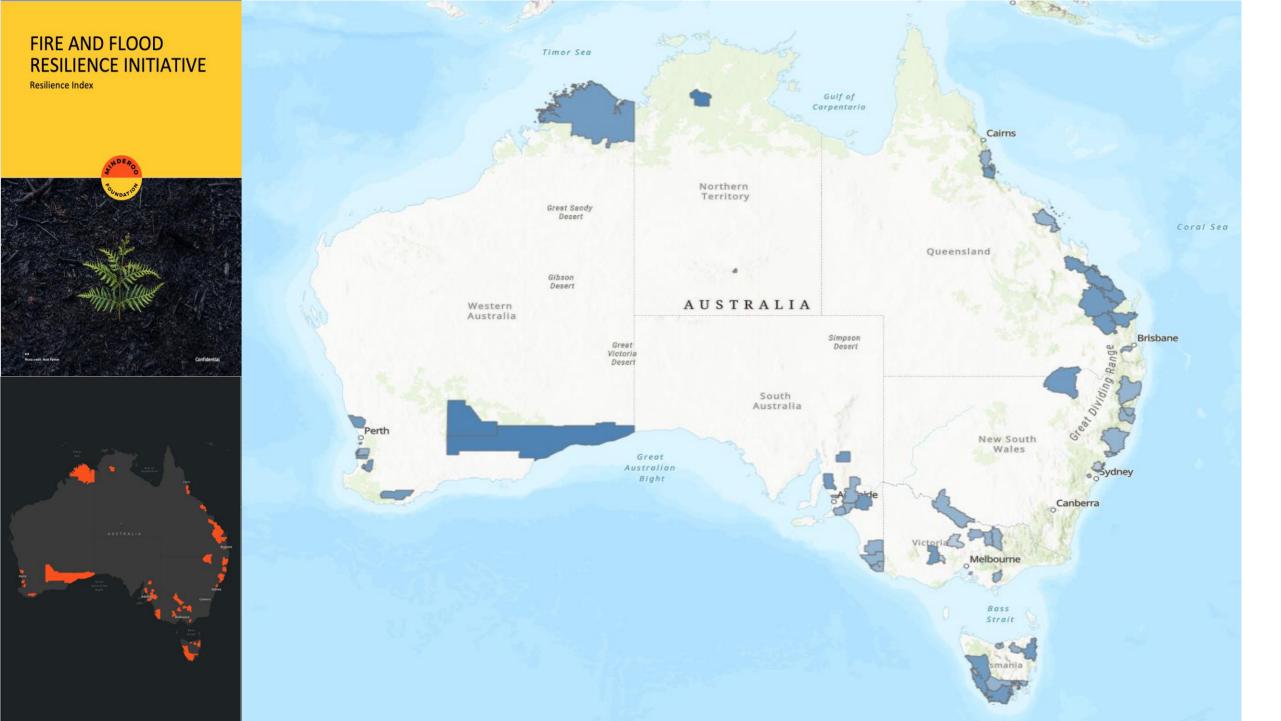

OUR VISION ~ FOR WHAT RESULT?

- A network of resilient communities who activate throughout the year to build their own community's resilience, and to support the resilience of other communities, regardless of location, population characteristics or community socio-economic status.
- A network of community leaders who lead that resilience effort and connect with communities across the country
- Young people who understand the International, Australian and local contexts for disaster resilience and have the knowledge, skills and motivation to activate and work together to lift disaster resilience and reduce our (individual and collective) vulnerability in the future
- A collaborative partnership between government, NGO, business sector and communities with openly shared alignment and information to guide resilience building action.

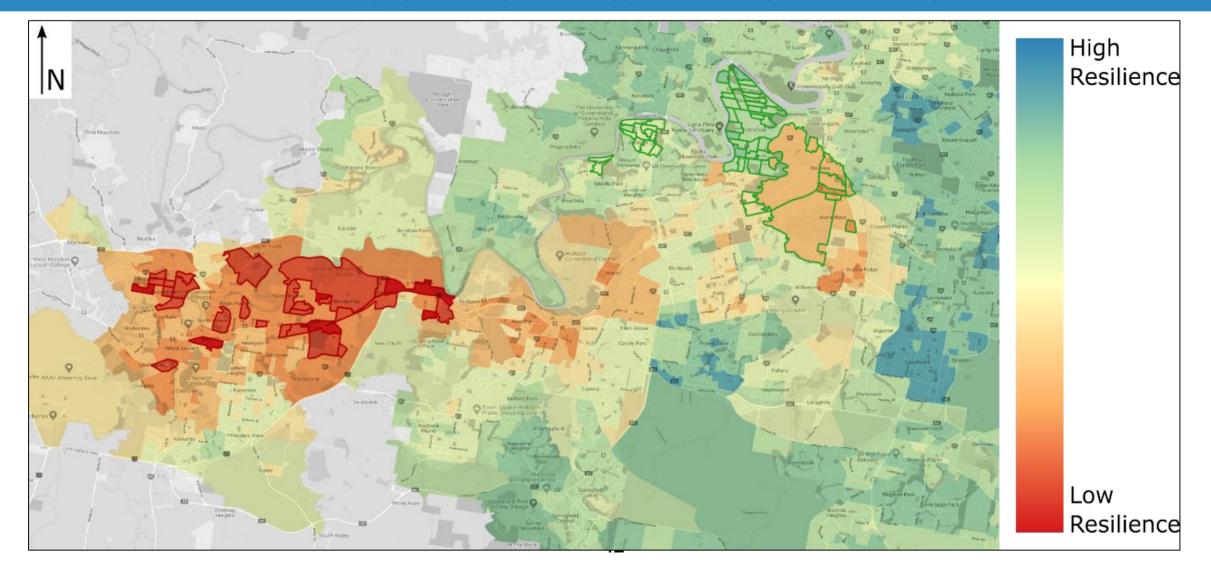

Regions 'up close'

We consider the locations (SA1s) within the bottom 20% of the Relative Exposure component of the Resilience Index so that locations are taken into consideration that are sufficiently exposed as to place their populations under pressure that they need to be resilient to.

PRINCIPLES

PRINCIPLE Community-Led Approaches

Strengthen the ownership and decision-making power of community members, and ensure all efforts reflect and leverage a community's unique context, history, assets and local knowledge.

WHY THIS MATTERS

Community-led projects are proven to be especially effective and durable over the long term. By establishing a sense of shared dialogue, decision making, and ownership of local development efforts, community members are empowered to engage with resilience building projects in ways that strengthen local leadership, accurately address local context, and ultimately lead to better outcomes during times of crisis.

On the other hand, by failing to leverage a community's unique leadership, needs, desires, and assets, practitioners run the risk of developing short-lived solutions that overlook the best interest of local residents and do not benefit from or strengthen their knowledge and capacities.

PRINCIPLE Risk Aware and Forward Looking

Draw from a wealth of knowledge and experience to understand and respond to risk, and recognise that the past is not always predictive of a changing future. Create a vision of a more resilient future that community members can align around.

WHY THIS MATTERS

Traditionally, risk managers (and resilience builders) have focused on past events to understand risk, estimating the 100-year flood or historic bushfire exposure. While that is still an important perspective, climate change and other macro trends, like shifting migration patterns, increased population growth and land use in vulnerable, exposed or high-risk locations, underscore the point that the past is not always a good predictor of the future in the 21st Century. The most resilient communities are able to imagine uncertain futures and events, and plan and act accordingly.

Additionally, communities can use forward looking processes to imagine secure futures for all, another important tool for aligning community actors around multibenefit actions that contribute to strengthening resilience.

PRINCIPLE Inclusive Engagement

Ensure broad and equitable participation of those who represent a community's diverse perspectives, priorities and histories.

WHY THIS MATTERS

At its core, resilience demands whole of society interventions that require broad engagement across diverse communities. By engaging with representatives from all groups, a community enhances social cohesion, better understands the full magnitude of the challenges it faces and is able to deploy holistic interventions that will prove more successful for the entire community in the face of disaster, given the diverse perspectives that will influence the development process.

Without representation from, and engagement with, all of a community's diverse groups before the next disaster, communities will continue to face inequitable recovery cycles where excluded groups, those often most impacted by disaster, may lack the resources and support necessary to prepare, respond, and recover.

PRINCIPLE Integrated Action

Align efforts across sectors and disciplines utilising a collaborative approach to support and advance holistic, coordinated and shared outcomes.

WHY THIS MATTERS

Resilience-building involves efforts across many diverse systems and stakeholders. For efficiency reasons however, our society has evolved into sectors and silos organised around organisation type, such a public, private or nonprofit, as well as professional disciplines, such as transportation, health or housing or land use and planning.

Ensuring alignment and collaboration between these silos is a resilience issue for two reasons. First, during largescale disasters we see cascading impacts across sectors. Too often, vulnerabilities that originate in one sector are not recognised by other sectors. Traffic engineers designing a new highway may not fully anticipate the impacts on health, economy or culture. The second reason is that working in an integrated way across sectors and silos allows communities to leverage diverse areas of expertise to ensure that a single intervention results in multiple benefits to its residents, thus strengthening the community's ability to respond to a variety of crises and their consequences.

PRINCIPLE Accountable

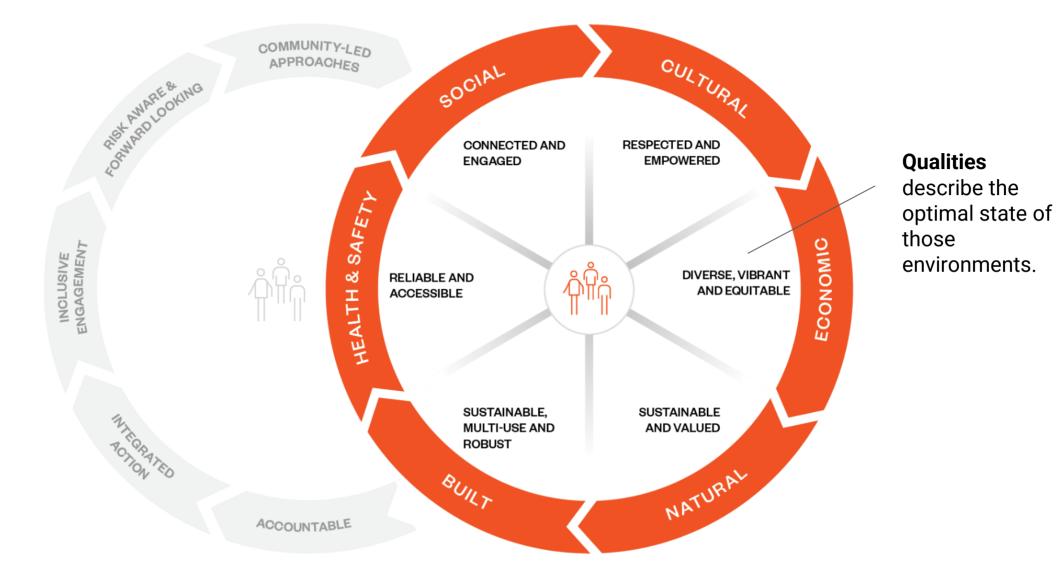

Hold self and others accountable for decisions, actions and outcomes, including the responsibility for learning and continuous improvement, in a way that builds trust and promotes transparency and a sense of shared ownership.

WHY THIS MATTERS

Resilience-building is often a multi-year (or even generational) process involving efforts across many diverse stakeholders. As such, it is critical to put mechanisms in place to specify and track key roles, responsibilities, lessons and progress towards goals over time. Without this accountability, a project is at risk of incompletion, a 'watering down' of multi-benefit outcomes, and a missed opportunity to learn from failures and scale successes.

When all parties remain transparent and committed over time, communities are more willing to engage with and trust practitioners — enhancing the productivity of ongoing and future preparation, recovery, and resilience building efforts.

Environments are made up of interconnected systems and assets

Connected & Engaged Social Environment

Social cohesion is prioritised and diversity is celebrated. Community leadership and governing mechanisms are clear, purposeful and trusted. Residents are empowered to create and participate in civic opportunities. Educational opportunities are varied, accessible and effective. Social infrastructure creates common ground between diverse residents and forms the basis of a larger sense of belonging and collective life.

SYSTEMS AND ASSETS

A community's people, governance, leadership and social networks, civic and educational institutions, justice and rule of law.

QUALITIES

Connected & Engaged

Respected & Empowered Cultural Environment

Community members' knowledge, histories and identities are valued and celebrated. Culturally informed knowledge and practises are utilised before, during and after disaster. Residents develop and engage in diverse cultural activities.

SYSTEMS AND ASSETS

A community's customs, identities, history, wisdom, arts, cultural responsibilities and landmarks. **QUALITIES** Respected & Empowered

Diverse, Equitable & Vibrant Economic Environment

Economic activities do not entirely depend on one sector; the local and greater regional economy is thriving; there is sufficient investment in resilience building; and there are minimal economic disparities between groups.

SYSTEMS AND ASSETS

A community's economic activities, workforce, businesses, household livelihoods, goods and services, social services and occupational opportunities.

QUALITIES

Diverse, Equitable & Vibrant

Sustainable & Valued Natural Environment

Natural assets and ecosystems are understood, valued, invested in, and managed to maintain a wide array of services, safeguard culture and tradition, support local amenity, enhance biodiversity, and mitigate natural hazard risk.

SYSTEMS AND ASSETS

A community's biodiversity and ecosystems, land management, wildlife, natural resources, agriculture, water and air.

QUALITIES

Sustainable & Valued

Sustainable, Multi-Use & Robust Built Environment

Infrastructure promotes socioeconomic and ecological processes that enhance equity and wellbeing. It is designed to withstand hazards, has appropriate redundancy, and is not over-reliant on a single asset.

SYSTEMS AND ASSETS

A community's residential and commercial buildings, transportation, communications and information systems, and utilities

QUALITIES

Sustainable, Multi-Use & Robust

Reliable & Accessible Health and Safety Environment

All residents feel safe, secure and informed. Essential and emergency services actively plan for all phases of the disaster cycle, and prioritise residents' and their own staff's physical and mental health and wellbeing. Comprehensive, transparent and contextually appropriate law enforcement promotes safety and security for all community members.

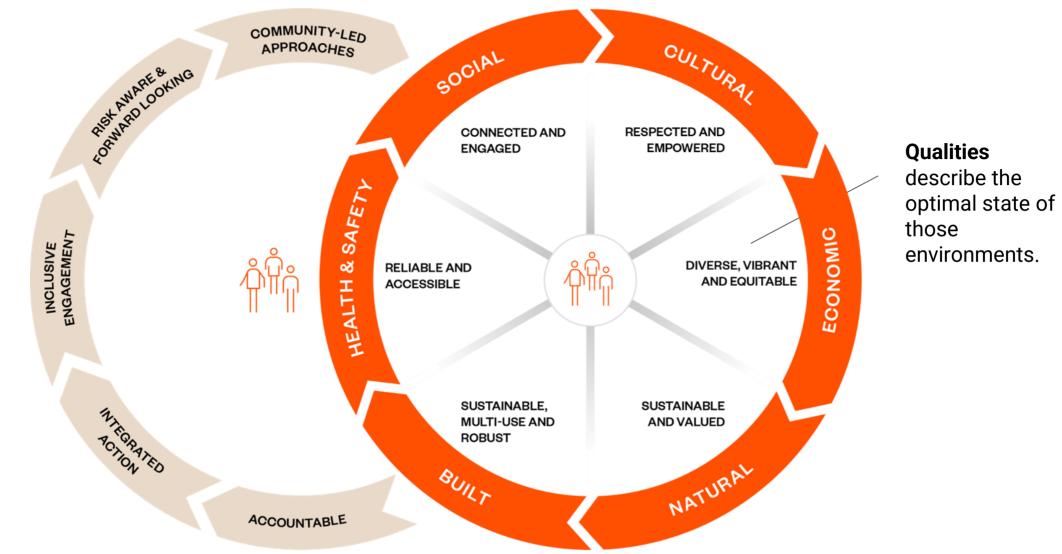

SYSTEMS AND ASSETS

A community's health facilities and services, disaster planning, essential and emergency services.

QUALITIES

Reliable & Accessible

Environments are made up of interconnected systems and assets

COMMUNITY-BASED WORK | Ways of Using the Framework

Using the definition of resilience, the specific principles and environments, the tools, and/or Framework as a whole, to:

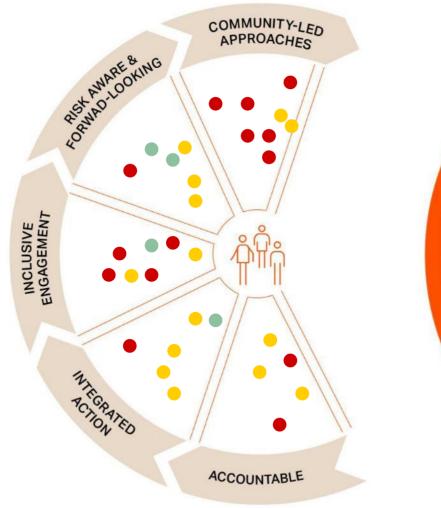

- 1. Socialize resilience as a concept use the definition and the broad outline of principles, qualities and environments to introduce holistic resilience thinking (**Roadshow**)
- 2. Guide engagement with communities use principles to intentionally structure engagement
- Start a conversation about resilience strengths and weaknesses of a community use the principles and environment/qualities to assess a community's resilience areas and prioritize key actions at the beginning of an engagement (Assessment & Prioritization Tool)
- 4. Develop Resilience plan/strategy document use the Framework to guide the development of a resilience plan in a community with principles, environments, qualities helping structure the plan and providing a consistent thruline for goals and initiatives
- 5. Enhance project-level work use the Framework to bring additional resilience value to project design and implementation, and help project owners avoid unintended negative consequences (**Project Enhancement Tool**)
- 6. Monitor & evaluate progress of resilience building efforts in community use the Framework to track progress towards goals as measure by qualities/environments and principles
- Report on funded activities use the Framework to organize the grantee's reports to Minderoo, to enable easy aggregation across projects/communities, as appropriate

AUSTRALIAN RESILIENCE CORPS

1 min video (

OUR PURPOSE

To harness our nation's collective strength to prepare and protect us from fires and floods before they occur.

With ambition to be the nation's largest on-call volunteer and training resource, for the preparation and protection against the devastation of fire and flood.

Connecting the right help with those who need it most, with and through partners.

To assist in helping existing volunteer organisations prepare communities in the off-season.

Australian Resilience We're bringing ogether a growing number of volunteers to build more resilient communities. Compas ion, skill and goodwill come ther, we can act so that we are better prepared. ect those we love and the things from the ravages of fire and floods. e to the Australian Resilience Corps is the place where you can harness kills, together with a growing group of volunteers, empowered to help where I're needed most. **Our Community** Lifeling Rotary

A FIRE INSIDE ALL OF US

It was hell. I would never wish it

How would you describe the Australian Resilience Corps

The Australian Resilience Corps is driven by the Minderoo Foundation

Fire and Flood Resilience Initiative, with and through existing volunteer

organisations. The aim is to create the largest network of volunteers to help

before natural disasters strike, Preparedness is key. Minderoo Foundation

and NRMA Insurance, as a tounding partner of the Australian Resilience

modules for whichever volunteer organization that people may have an

wanting to do is to mobilise the whole country before disaster strike

Corps, are working with the country's leading volunteer organisations and

state Australia. There's a role for everyone, with 6 different training

nmunities implement locally developed plans to improve their resilience

Adrian Turne CEO. Minderoo Fire and Rood Resilience Initiative

January 4, 2020 is indelibly marked in the memories of the three Turner brothers, who came close to losing their lives, as a firestorm ripped its way through Palmyra in the Kangaroo Valley In NSW Southern Highlands, threatening everything in its wake. The events that followed, sparked a fire inside Adrian Turner and within days of defending his older brother Nick's property, he agreed to steer one of the boldest initiatives of his career. This month sees the launch of the first ever nationwide volunteer network, the Australian Resilience Corps, the sole purpose of which is to protect Australia from future fire and flood.

The launch of the Australian Resilience Corps is personal for you tell us about your experience in the bush fires of 2019-207

It was hell. I would never wish it upon arryone. We expected the fire to com from one side, it came from three, it was just fury. Chronic conditions, Pitch black with 30 metro high and 200-metro-wide flames. We tought for about 6 and a half hours. My brother is an architect and he'd built to code. For months leading up ha'd cleared vegatation from around the house and had made a conscious effort to propere in case the fire came through. I believe, preparation and active land management saved the property and us. The houses on either side of the property were destroyed.

"We all have a sense of purpose 07% of our spend nationally is on response and recovery. We see amazing nannia nut up their hand to help clean up atterwards and deal with the and its core to being human. It's aftermath - but its upside down. It's not really going to solve the core of the problem. Having just been through the fires, it was pretty hard to say no the essence of who we are and what drives us."

You described the feature length documentary film 'A Fire Inside' as the lightning strike for the Australian Resilience Corps, what do you mean by that

This film talks to the power of help and highlights the extraordinary spirit of arism during the Plack Summer hush fires. The Australian Re Corps is part of a bigger ambition to inspire all Australians to get behind

CB Exclusive - Watch the film. Read the book. Join the Corps. NRMA Insurance has released 'A Fire Inside' - a significant project including a feature length documentary and a book - to create a national movement in partnership with Minderoo Foundation, to mobilise Australia's largest contingency of volunteers to prepare and protect Australia from future natural disasters. Renowned and multiple award winning creative, Nick Worthington, was engaged as a writer

on the documentary. 'A Fire Inside', and to lead the creative direction of the broader project

Disaster that hole. I think we all have a fire inside. We all have a same of numory and its core to being human. It's the essence of who we are and what drive us. The film shows the importance of volunteerism and the impact it has an

What kind of activities will aspiring volunteers be able to join

In 2022, volunteers will be able to join "Muster" activities in communities that are vulnerable to fires and floods to help prepare. These volunteers will have controlated resilience training with whatever volunteer organisation that resonates with them. Then, not unlike Clean Up Australia Day, we will come together to volunteer and work with communities to prepare before fires and floods strike. The Muster activities will be defined by each local unity. They understand better than anyone where help is needed most

ponse to create a national army of volunteers has been incredible Australia is also stapping up to promote the Australian Resilience Corps to their employees. Joining the Corps isn't about standing in tront of a fire and tighting. Volunteerism is so broad. There is something for everyone of every

MEET SOME OF OUR VOLUNTEERS

Monique Lehane BlazeAid

I love surfing the East coast, when I head off on a trip, I try and add a day or two to stop in at a BlazeAid camp along the way. I surprise myself with how much I want to keep going back, the connection to communities, other volunteers and the impact we have, has been amazing.

Rick Sneeuwjagt Rotary Western Australia I volunteer with Rotary to help communities improve bushfire preparedness and overall resilience. I help local agencies and community groups to identify the risks within their community and then develop actions to increase the safety for all.

Davina Pye DRA

I find volunteering extremely rewarding. Whether I am out on the tools, working on logistics, drone mapping or any other activity, it all provides help to those in need. I am very happy to lend my skills to anything that will lighten the load for local communities, and also help to build more resilient communities.

Adam Moss QLD Fire & Emergency Services & DRA

I work closely with communities to build awareness and capability about the importance of getting prepared for natural hazards like fire and flood. In my experience, the strengthening of these community bonds enables safer and more resilient communities.

What about the next generation?

https://www.coolaustralia.org/resilient-australiaeducation-resources/

Questions and Discussion

THANK YOU!

mmoreton@minderoo.org

VARIABLES of community resilience

The following example variables are strongly indicative of communities being more or less vulnerable or resilient in the face of future fire and flood

Principles COMMUNITY-LED RISK AWARE & FORWARD-LOOKING	INCLUSIVE ENGAGEMENT INTEGRATED ACTION ACCOUNTABLE	
Vulnerable Community	Resilient Community	
 Few opportunities for engagement and participation Lack of integration or sense of belonging Disregard for local needs by decision makers 	 Strong social cohesion and connection between diverse groups Clear, purposeful and trusted leadership Accessible educational and social opportunities High participation in civic opportunities 	SOCIAL Connected and Engaged
 Imposed mainstream cultural preferences Overlooked or misunderstood cultural practises Limited engagement in diverse cultural activities 	 Respected identities, histories, and knowledge Understood, valued, and elevated cultural practices Welcomed and accessible cultural activities across diverse groups 	CULTURAL Respected and Empowered
 Under resourced emergency services Lack of trust in first responders and law enforcement Inability or difficulty to meet basic needs 	 Well prepared emergency services Safe, secure and informed residents Comprehensive and transparent law enforcement Prioritised physical and mental wellbeing of all residents 	HEALTH & SAFETY Reliable and Accessible
 Disinterest in ecosystem health Short-term valuation Extractive and damaging land use 	 Sustainably managed and valued ecosystems Enhanced biodiversity Protected culture and tradition of the natural environment 	NATURAL Sustainable and Valued
 Overreliance on a single asset Vulnerable or aging infrastructure Single-benefit assets, managed in silos 	 Forward-looking zoning and codes Appropriately redundant assets Full sustainability throughout lifecycle of an asset 	BUILT Sustainable, Multi-use and Robust
 Significant under employment or joblessness Reliance on one sector Lack of support for businesses 	 High levels of economic equity and financial wellbeing Sustained growth across multiple sectors Thriving local and regional economies 	ECONOMIC Diverse, Equitable and Vibrant

Potential Interventions (examples)

<u>Economic</u>

- State Government (Services NSW model) provides vouchers to spend \$ in local businesses
- Financial skills capacity building or mentoring program for local business owners – Business Volunteers Aust.
- Disaster Recovery Business Continuity planning with local businesses – workshops and advice
- Grant writing workshops and capacity building – to fund local initiatives for local community groups and businesses

<u>Natural</u>

- Household and neighbourhood clearing of natural hazards gutters, trees, undergrowth to minimise fire risk (Corps activation)
- Household and neighbourhood based clearing of drains, digging drains, and building retaining walls to mitigate flood water and runoff (Corps activation with Local Council involvement)
- Landcare activities to plant and manage species of flora that minimize fire or flood risk
- Indigenous cool burns are conducted by Indigenous groups with local emergency services

<u>Social</u>

- Local community days and festivals in partnership with local community groups and emergency services
- Community workshops conducted to include diverse individuals and groups, to build social connections, and participate in disaster resilience planning processes (household and neighbourhood)
- Local youth leadership program implemented to engage youth with emergency services volunteers

<u>Built</u>

- Working bees of local community members undertake maintenance of community buildings to enhance the resilience of priority community buildings/assets
- Funding is allocated to disaster resilient infrastructure projects from governments, corporate sector, philanthropy
- Upgrade of disused local community building - to become a resilience hub for coordinating preparation and planning, and if an emergency arises to become an evacuation or recovery hub

<u>Cultural</u>

- Indigenous groups are supported to maintain and protect cultural sites of significance
- Indigenous cultural activities are undertaken to enhance the connection with the broader local community
- Local cultural groups are supported to liaise with emergency services to enhance household resilience
- Disaster resilience plans are developed to focus on asset protection of local art galleries and historic sites/landmarks

Health and Safety

- Disaster plans are developed and enacted with local aged care facilities
- Local disability groups are supported to raise hazard awareness and develop disaster plans for individuals, houses and groups
- A project is supported to engage with GPs and other health practitioners to identify risks to the provision of medical and mental health services and care and to develop implement disaster plans
